

## EH&S Dashboard

Dashboards communicate complex information quickly. Quantum’s EH&S Dashboard is a fully integrated reporting tool for FacTS™, an Enterprise-Wide Environmental Health and Safety Information Management System. The Dashboard generates Key Performance Indicators (KPI) from data stored in FacTS and displays the results using gauges, maps, charts, etc. The Dashboard also reads data from other corporate databases to generate reports on that data, or combine it with data in FacTS to monitor corporate KPIs. It also offers easy Ad Hoc report creation without requiring system administrator resources.

The EH&S Dashboard is a web based interface to the FacTS database where reports using gauges, maps, charts, and other graphics to show multiple results together are posted. This dynamic Dashboard also lets you drill down to other data sources and reports for more details about the information displayed on the Dashboard. Users can customize the Dashboard to see information most pertinent to their corporate role.

FacTS™ EH&S Dashboard features include:

- ❑ Access Key Performance Indicator (KPI) to assist managers in making decisions quickly.
- ❑ Ability to personalize the layout gives you the power to choose how to access critical information to improve productivity.
- ❑ Security features ensure that employees only see data applicable to their role in the company’s organization.
- ❑ Read data from other corporate databases to track corporate KPIs, or combine with FacTS data to generate sustainability metrics.
- ❑ Select from a large number of formatting options for complete control over data access and presentation.
- ❑ Allows employee access to critical EH&S business information when they need it, in a format that simplifies the decision making process.
- ❑ Sort and filter information, save common filters and convert based on time zones.
- ❑ Publish any report instantly for end users to view, schedule, and share over the web.
- ❑ Schedule reports for automatic updates.
- ❑ Export data into many formats for additional data manipulation.

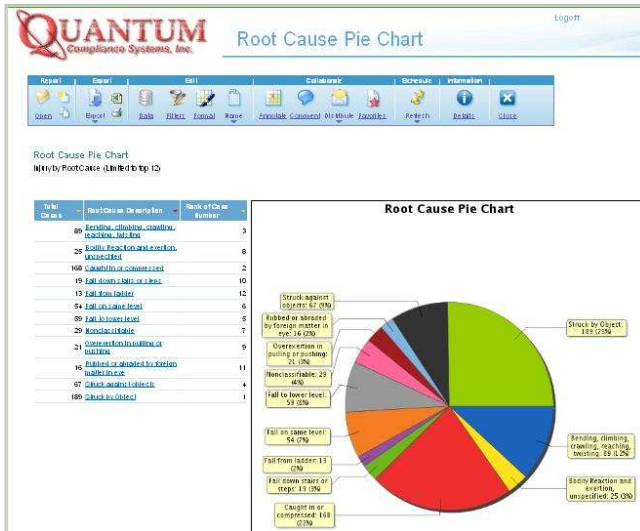

## EASY REPORT CREATION

The FacTS EH&S Dashboard opens up a wide range of reporting opportunities by freeing up the user from static reports and delivers analysis and information in real time for both management

and planning. The FacTS™ Dashboard lowers the complexity of your reporting environment. Users can select from a library of graphical formats to use and select fields to include by dragging and dropping. They can easily search for a field name from a search box. Reports can also be integrated with Google Maps for easy tracking or comparisons by geographical locations.

The report tools enable end users to easily create and access reports via the web. Power users and skilled business users can use this powerful technology to report on and analyze EH&S data in support of their company's overall organizational goals and objectives.

In addition, they are able to provide upper level management real time and what-if data for decision-making.

## MOBILE DEVICE ACCESS

EH&S Dashboard works on smart phones and tablets to provide business professionals with the flexibility and security required to access business critical information, wherever they are, and whenever they need it. Newly created reports can be sent to the user's inbox while they travel, keeping them up-to-date. Users are logged out after 20 minutes of inactivity. In addition, no data is stored on the phone so a lost phone does not enable unauthorized access to business data.

Mobile users can:

- ❑ View all reports and data at native high-resolution picture quality.
- ❑ Receive proactive alerts and exception reporting.
- ❑ Select, drill down and through data points by swiping or touching the screen.
- ❑ Switch between portrait or widescreen modes for best viewing option.
